

Network Security Assessment - Vulnerability Findings Report

1. Introduction

This report documents the vulnerabilities and security weaknesses identified during the Network Security Assessment.

The findings are based on network scanning activities, service identification, and security analysis. Each finding has been evaluated based on potential impact and risk level.

2. Vulnerability Assessment Summary

Finding ID	Vulnerability / Issue	Risk Level
VUL-001	Unnecessary open network ports	Medium
VUL-002	Exposed remote access services	High
VUL-003	Service configuration weaknesses	Medium
VUL-004	Insufficient network monitoring	Medium

3. Detailed Findings

Finding VUL-001: Unnecessary Open Network Ports

Risk Rating:

Medium

Description

The network assessment identified open ports that may expose services unnecessarily to users or potential attackers.

Security Impact

Open ports increase the attack surface and may provide opportunities for unauthorized access if services are not properly secured.

Recommendation

- Review all active ports.
- Disable unnecessary services.
- Apply firewall restrictions.
- Perform regular port reviews.

Finding VUL-002: Remote Access Service Exposure

Risk Rating:

High

Description

Remote access services were identified within the network environment.

Security Impact

Poorly configured remote access services may increase the risk of unauthorized access attempts.

Recommendation

- Enable multi-factor authentication.
 - Restrict remote access permissions.
 - Monitor remote login activities.
 - Use secure authentication methods.
-

Finding VUL-003: Service Configuration Weaknesses

Risk Rating:

Medium

Description

Identified network services require configuration review to ensure security best practices are followed.

Security Impact

Incorrect configurations may result in information exposure or security weaknesses.

Recommendation

- Maintain secure configuration standards.
 - Remove outdated services.
 - Apply vendor security recommendations.
 - Regularly review system configurations.
-

Finding VUL-004: Limited Network Monitoring

Risk Rating:

Medium

Description

Network monitoring and logging processes require continuous improvement.

Security Impact

Limited monitoring may delay detection of suspicious activities.

Recommendation

- Implement centralized logging.
 - Monitor network events.
 - Perform regular security reviews.
 - Establish incident response procedures.
-

4. Risk Prioritization

Priority	Finding	Action Required
High	Remote Access Service Exposure	Immediate review and restriction
Medium	Open Ports	Security configuration review
Medium	Service Configuration	Apply hardening controls
Medium	Monitoring Limitations	Improve monitoring capability

5. Recommended Security Controls

The following controls are recommended:

- Network segmentation
 - Firewall rule reviews
 - Access control improvements
 - Secure configuration management
 - Regular vulnerability assessments
 - Security monitoring and logging
-

6. Conclusion

The vulnerability assessment identified several areas where network security controls can be strengthened. Addressing these findings will reduce security risks and improve the overall protection of network resources.
