

Nmap Scan Evidence

Assessment Tool

Tool Used: Nmap (Network Mapper)

Purpose

Nmap was used to identify active hosts, open ports, and available network services during the network security assessment.

Sample Scan Observation

Port	Service	Security Consideration
22	SSH	Requires secure authentication
80	HTTP	Requires secure web configuration
443	HTTPS	Requires certificate and configuration review
3389	Remote Desktop	Requires access restrictions

Assessment Note

The scan results were reviewed to identify possible security risks and support vulnerability assessment activities.
